

Lite Paper

ABSTRACT

Today, centralized solutions are used everywhere, in every aspect of our lives. But recently, the society has started to realize the shortcomings of centralized systems, and how the largest corporations conduct their business.

Therefore, we are witnessing tremendous growth in decentralized solutions that have emerged thanks to blockchain technologies.

Today, assets can be represented on a blockchain by a distinctive digital identifier called token. Tokenization is a method that converts rights into an asset through a digital token, in many ways similar to the traditional process of securitization. Transferring a real-world asset's information to the blockchain allows ownership rights to be transmitted and traded on a global and secure digital platform.

Any asset can be symbolized, from a valuable work of art to a gemstone to real estate or a car.

INTRODUCTION

The world has changed fundamentally in the past few challenging years.

Unprecedented global events have prompted countless questions on what we should expect next, and how we should move forward.

The world has moved into the digital age with the emergence of services and applications that leverage the way we communicate and transfer information to the next level. The accelerated and forced digital transformation has triggered the need for a constant search for innovation.

The darker side of rapid digitalization has seen the emergence of giants and monopolies.

BLOCKCHAIN

Blockchain has the potential to revolutionize economic and social interactions and ultimately become the backbone of a digital society.

Blockchain is a distributed ledger technology designed to prevent unauthorized access and ensure that records are immutable (nothing can be erased once it's added) and traceable without the need for centralized management. Such architecture allows different organizations to utilize one common database, which does not require human efforts to verify the integrity of the data and is protected from unauthorized interference.

Blockchain technology has proven its capabilities in handling data in a decentralized and secure way, collecting separate fragments into one common whole. Where the internet transmits information, blockchain is capable of efficiently transmitting value, whether it is rights of ownership, goods, or services. Efficiency implies both the speed of information exchange on the blockchain and ensuring its reliability, immutability, as well as building a secure and transparent mode of access to this data by only those who have the right to access it.

TOKENIZATION

The Benefits of Asset Tokenization

The foundation of a token economy offers the potential for a more efficient and fair financial world by greatly reducing the friction involved in the creation, buying, and selling of securities. Features like integrity, robustness, accessibility, and immutability, make blockchain a powerful accounting tool and the process of asset tokenization creates a myriad of advantages, including greater transparency, liquidity, and accessibility as well as faster and cheaper transactions.

Greater Transparency

A security token is capable of having the token holder's rights and legal responsibilities embedded directly into it, along with an immutable record of ownership. This immutable record means no one can "erase" your ownership even if it is not registered in a government-run registry. These characteristics promise to add transparency by tracking and recording the history of the asset every single time it changes hands.

Increased Liquidity

Tokenization of assets will create a more liquid world and could drastically change the dynamics of global trade. Tokenizing assets – especially private securities or typically illiquid assets such as real estate – enable them to be more easily traded on a secondary market chosen by the issuer. What's more, access to a broader base of investors increases the liquidity of these assets, benefiting investors who consequently have more freedom and sellers because the tokens benefit from the "liquidity premium" thereby capturing greater value from the underlying asset.

Globalization

When tokenization of assets reaches the mainstream, the global trade of (previously) illiquid physical assets could become an everyday reality. As assets become increasingly tokenized, global trade becomes less difficult, and an opportunity for developing new markets for previously underutilized illiquid assets opens up. As a result, people from different corners of the world will be able to own fractions of the same physical asset or exchange different kinds of assets directly and instantly.

Reduced Barriers To Entry

Importantly, tokenization could open up investment of assets to a much wider audience – thanks to reduced minimum investment amounts and periods. Tokens are highly divisible, meaning investors can purchase tokens that represent small percentages of the underlying asset. If every order is cheaper and easier to process, it will open the way to a significant decrease in minimum investment amounts. Moreover, the greater liquidity of security tokens could reduce minimum investment periods, since investors can exchange their tokens on secondary markets which are theoretically global and open 24/7 (subject to regulatory limits).

KALIZA \$AZA

"With Kaliza tokenize the world"

Tokenization is the bridge between blockchain and the real world.

Kaliza is a pioneer in the field of decentralized economy which is the logical complement to decentralized finance.

AZA is a token of Kaliza's platforms that offers simplified real-world investments. Our mission is to democratize access to investment opportunities, curated by a team of professionals.

Kalizapad is the first platform which offers investment in several different fields: NFT, real estate, auto, art, farming etc ...

Ownership of these properties is denominated by digital tokens \$AZA on the Solana blockchain. Ownership of most properties is determined by paper deeds. Kaliza replaces paper deeds with his AZA tokens; a new mechanism for ownership of assets, based on the blockchain.

Kalizalab

Kalizalab is a project incubator for tokenization.

Our incubator program will select and support the most promising teams and projects, giving them marquee status across our ecosystem of launchpads. Think of these projects as 'tentpole' projects, or the main events on our calendar.

Our legal department will help set up the best jurisdiction for your token and project, then, expert tokenomics design and vesting schedule creation.

In house development support, a token contract is created and audited.

Finally, we give access to our marketing and IDO platforms for the ultimate launch with industry connections through our advisor and extended network.

Kalizapad

The hallmark of Kalizapad is a two-round system, consisting of an open public lottery with no requirement for holding tokens, a participation lottery for lower levels and a guaranteed allocation for higher staking levels. Any of the allocations that are not bought in time are then offered on a 'first-come first-served' basis.

With Kalizapad the new tokenization project is launched. Once the IDO is completed, this same project will be filed in the appropriate platform.

Kaliza Nft

Kaliza NFT is an NFT platform for holding, buying, selling and creating NFTs.

Kalizacar

Kaliza Car is a platform for renting, buying and selling tokenized cars, trucks, and motorcycles.

Kaliza Real Estate

Kaliza Real Estate is a platform for renting, buying and selling tokenized real estate.

Kalizafarm

Kalizafarm is a farming platform for staking or lending crypto assets in order to generate high returns or rewards in the form of additional cryptocurrency

With Kalizapad the new tokenization project is launched. Once the new IDO is completed this same project will be filed in the appropriate platform.

Kaliza's Tiered System

10% for public white list lotteries (open to anyone who completes tasks, no tokens required)

15% for lottery Mercurium tiers

15% for lottery Saturnium tiers

60% for guaranteed allocation higher tiers

MERCURIUM

500 USD

- Access to IGO's by lottery
- Early access to new ido, beta versions and expansions
 - Chance of free gaming NFT airdrops
 - Early access to new Kaliza features

SATURNIUM

2 000 USD

Pool Weight: 6

- Access to IGO's with standard allocation
- Early access to new ido, beta versions and expansions increased chance of free gaming NFT airdrops
 - Chance of free gaming token airdrops
 - Early access to new Kaliza features

NEPTUNIUM

5 000 USD

Pool Weight: 12

- Access to IGO's with upgraded allocation
- Early access to new ido, beta versions and expansions increased chance of free gaming NFT airdrops
 - Chance of free gaming token airdrops
 - Early access to new Kaliza features

PLUTONIUM

20 000 USD

Pool Weight: 33

- Access to IGO's with premium allocation
- Early access to new ido, beta versions and expansions increased chance of free gaming NFT airdrops
 - Chance of free gaming token airdrops
 - Early access to new Kaliza features

Buring

Kaliza takes on the challenge by carefully balancing the rewards using a long-term token-burning strategy.

This will incentivize holders while providing a sustainable growth model for the \$AZA token.

KalizaPad's main deflationary mechanics include a 10% fee on all staked token sales (7.5% of this fee will be returned to token holders in AZA; 2.5% will be burned forever) and an unlock fee anticipated up to 25%.

There will be no commission for withdraw after 8 weeks.

Token Metric

Max suply: 16 180 339 887
AZA Suply at listing:1 610 000 000
AZA Initial market cap: 161 000 USD
Public initial price: 0.0001 USD
